A Better Life for Child Labourers and Their Families in Egypt

A Future Without Child Labour

This book explores the alternative experiences of children and young people whose everyday lives contradict ideas and ideals of normacy from the local to the global context. Presenting empirical research and conceptual interventions from a variety of international contexts, this book seeks to contribute to understandings of alterity, agency and everyday precarity. The young lives foregrounded in this volume include the experiences of transnational families, children in ethnic minority communities, street-living young people, disabled children, child soldiers, victims of abuse, politically active young people, working children and those engaging with alternative education. By exploring ‘other’ ways of being, doing, and thinking about childhood, this book addresses questions around what it is to be a child and what it is to be marginalised in society. The narratives explore the everydayness and the mundanity of difference as they are experienced through social structures and relationships, simultaneously recognizing and critiquing notions of agency and power. This book, including a discussion resource for teaching or peer reading groups, will appeal to academics, students and researchers across subject disciplines including Human Geography, Children’s Geography, Social Care and Childhood Studies.

Childhood and Child Labour in Industrial England

Studies of child labour have examined the experiences of child workers in agriculture, mining and textile mills, yet surprisingly little research has focused on child labour in manufacturing towns. This book investigates the extent and nature of child labour in Birmingham and the West Midlands, from the mid-eighteenth century to the end of the nineteenth century. It considers the economic contributions of child workers under the age of 14 and the impact of early work on their health and education. Child labour in the region was not a short-lived stage of the early Industrial Revolution but an integral part of industry throughout the nineteenth century. Parents regarded their children as potentially valuable contributors to the family economy, encouraging families to migrate from rural areas so that their children could work from an early age in the manufacture of pins, nails, buttons, glass, locks and guns as well as tin-plating, carpet-weaving, brass-casting and other industries. The demand for young workers in Birmingham was greater than that for adults; in Mary Nejedly's detailed analysis the importance of children's earnings to the family economy becomes clear, as well as the role played by child workers in industrialisation itself. In view of the economic benefit of children's labour to families as well as employers, both children's education and health could and did suffer. As well as working at harmful processes that produced dangerous fumes and dust or exposed them to poisonous substances, children also suffered injuries in the workplace, mainly to the head, eyes and fingers, and were often subjected to ill-treatment from adult workers. The wide gulf in economic circumstances that existed between the families of skilled workers and those of unskilled workers, unemployed workers or single-parent families also becomes evident. Attitudes towards childhood changed over the course of the period, however, with a greater emphasis being placed on the role of education for all children as a means of reducing pauperism and dependence on the poor rate. Concerns about health also
gradually emerged, together with laws to limit work for children both by age and hours worked. Mary Nejedly's clear-eyed research sheds fresh light on the life of working children and increases our knowledge of an important aspect of social and economic history.

Hidden Hands

Master's Thesis from the year 2008 in the subject Politics - International Politics - Topic: Development Politics, grade: Merit, University of Birmingham (International Development Department (IDD)-School of Public Policy), course: International Development, language: English, abstract: The perception of child labour in Egypt like in any other place in the world has been changed dramatically in recent years. The current debates about child labour have conceived child labour as vital element for the survival of poor families. Most of the traditional interventions were focusing on combating child labour with no consideration to the living circumstances of the child labourers, controversially the new approaches by different national and international stakeholders started to adjust their interventions to be appealing to the circumstances of child labourers and their families. The main theme of this dissertation is to examine the effectiveness of one of these interventions and its sustainability. For that purpose, a field research in Cairo, the capital of Egypt has been conducted. The aim of the field research is to analyse one of the interventions that implemented through coordination between the Egyptian Government through the National Council of Childhood and Motherhood and one of the Egyptian NGOs Abo Soud Social Development Association NGO. This Egyptian NGO carried out a child labour oriented project in partnership with an Italian NGO Cooperation Internazionale Sud Sud through Children at Risk Programme that funded by the European Union. Using different quantitative and qualitative methodologies, the researcher tried to obtain the perception of child labourers and their families about the implemented activities in order to investigate whether the children's rights and best interests were considered in the course of designing and implementing the activities of the project. This dissertation challenges the argument that child labour became essential for the surviva

Child Employment in the Capitalist Labour Market

This book aims to fill an important gap in the child labour literature by bringing together a selection of policy perspectives on child labour issues by authors who stand at the forefront of research and/or policy analysis in the field. Many of the contributions comment on the changing dynamics of discourse on childhood, child work, education and the relations between them. In academic circles, new perspectives view children not as passive recipients of experience and 'socialization' but as more active participants and contributors to their own development and social worlds. These ideas have far-reaching implications for our understanding of children's competences, rights, responsibilities and needs, and their (potential) sources of resilience in the face of risk, adversity and abuse. Apart from stimulating a more realistic debate on the issue of 'child labour' world-wide, this volume contributes to the process of more empirically grounded research that will bring into the open the many social, economic and psychological aspects that are associated with children when they get involved in whatever form of work.

The Industrious Child Worker

The book gives an overview of the nature and extent of the problem of child labour, and the consequences for the victims. These volumes discuss in details the shocking scene of child labour, Reforms in child labour, Challenges of measuring child labour, Children and prostitution, Global response to child labour, Action against child labour, Educational strategies to eliminate child labour, Natural disaster and child labour. It also discusses sympathetically economic exploitation of children.

Outlines and Highlights for Childhood and Child Labour in the British Industrial Revolution by Jane Humphries, Isbn

"The World of Child Labor" details both the current and historical state of child labor in each region of the world, focusing on its causes, consequences, and cures. Child labor remains a problem of immense social and economic proportions throughout the developing world, and there is a global movement underway to do away with it. Volume editor Hugh D. Hindman has assembled an international team of leading child labor scholars, researchers, policy-makers, and activists to provide a comprehensive reference with over 220 essays. This volume first provides a current global snapshot with overview essays on the dimensions of the problem and those institutions and organizations combating child labor. Thereafter the organization of the work is regional, covering developed, developing, and less developed regions of the world. The reference goes around the globe to document the contemporary and historical state of child labor within each major region (Africa, Latin and South America, North America, Europe, Middle East, Asia, and Oceania) including country-level accounts for nearly half of the world's nations. Country-level essays for more developed nations include historical material in addition to current issues in child labor. All country-level essays address specific facets of child labor problems, such as industries and occupations in which children commonly work, the national child welfare policy, occupational safety regulations, educational system, and laws, and often highlight significant initiatives against child labor. Current statistical data accompany most country-level essays that include ratifications to UN and ILO conventions, the Human Development Index, human capital indicators, economic indicators, and national child labor surveys conducted by the Statistical Information and Monitoring Program on Child Labor. "The World of Child Labor" is designed to be a self-contained, comprehensive reference for high school, college, and
Child Labour

A comprehensive study of the occupational health of employed children within the broader context of social, industrial and environmental change between 1780 and 1850.

Child labor

This work examines the ways in which capitalist societies deal with child labour. It looks at the situation in Glasgow and London, at gender differences in child labour, at social factors and at how children labour in newly-industrializing and underdeveloped countries.

Child Labor in Sub-Saharan Africa

Child labour in fishing

Children and Youth in the Labour Process in Africa

Study conducted in Sialkot city in Pakistan.

The Routledge Handbook of the Philosophy of Childhood and Children

This is a unique account of working-class childhood during the British industrial revolution, first published in 2010. Using more than 600 autobiographies written by working men of the eighteenth and nineteenth centuries Jane Humphries illuminates working-class childhood in contexts untouched by conventional sources and facilitates estimates of age at starting work, social mobility, the extent of apprenticeship and the duration of schooling. The classic era of industrialisation, 1790-1850, apparently saw an upsurge in child labour. While the memoirs implicate mechanisation and the division of labour in this increase, they also show that fatherlessness and large subsets, common in these turbulent, high-mortality and high-fertility times, often cast children as partners and supports for mothers struggling to hold families together. The book offers unprecedented insights into child labour, family life, careers and schooling. Its images of suffering, stoicism and occasional childish pleasures put the humanity back into economic history and the trauma back into the industrial revolution.

Intersectionality and Difference in Childhood and Youth

Bass’s comprehensive, systematic study examines the complex factors framing child labor in Africa and offers a window on the lives of the child workers themselves.

The Elimination of Child Labour: Whose Responsibility?

Hidden Hands focuses on a specific and neglected area of contemporary child welfare; that of children’s paid work and labour. This book provides the first cross-cultural examination of children’s productive activities, their relationship to children’s broader social lives, and their implications for the child’s education, welfare and well-being. The contributors look at the situation both here and overseas. They discuss issues including conflicts between schooling, education and work in the UK, child poverty, motivating children to work, children from ethnic minorities, the work and labour of children in industrialised countries and the situation in the US, Denmark, Germany and Russia. The growth in the study of childhood encompasses anthropology, sociology, social policy and social work, as well as education. This book will be of use in all of these areas.

Children of a Bitter Harvest

Examensarbeit aus dem Jahr 2013 im Fachbereich Englisch - Literatur, Werke, Universität Paderborn (Institut für Anglisik/Amerikanistik), Sprache: Deutsch, Abstract: 'When the empty bottles ran short, there were labels to be pasted on full ones, or corks to be fitted to them, or seals to be put upon the corks, or finished bottles to be packed in casks. All this work was my work, and of the boys employed upon it I was one. [...] As often as Mick Walker went away in the course of that forenoon, I mingled my tears with the water in which I was washing the bottles, and sobbed as if there were a flaw in my own breast, and it were in danger of
This citation taken from Charles Dickens' novel 'David Copperfield' impressively exemplifies a very important aspect of British history and the history of The Industrial Revolution in general. The time which is nowadays mostly associated with great progress, rising productivity rates, mass production and a general advancement in terms of science and technology was to large extends based upon the cheap and disposable manpower of children and young adults who 'between 1800 and 1850, ['] helped make Britain's economy the most advanced in the world.' As Marjorie Cruickshank puts it in her book 'Children and Industry' child labour was ubiquitous in Victorian England: 'They [the children] were visible everywhere in the crowded thoroughfares as sweepers, beggars, and pickpockets. They were part of the mass of labourers in the workshops, factories and brickfields.' With regard to this estimation the following term-paper will deal with the description of working-class childhoods and child labour in Victorian England as they are presented in Charles Dickens’ novels ‘David Copperfield’ and ‘Oliver Twist’. How was the life and work of children during the climax of the first phase of the Industrial Revolution like? Which aspects of childhood were Dickens’ describing in his novels and were his depictions close to reality or did he rather rely on artistic exaggeration? In order to answer these questions the first part of this work will deal with the Victorian perception of childhood in general before it focuses on the portrayals of children and childhood which Dickens has immortalized in his works. There will be a closer look at the perception of childhood during the time in which the novels are taking place, which roughly relates to the first decade of Queen Victoria’s reign from the late 1830’s to the early 1850’s. The question is how children were perceived by the Victorians and how the phenomenon of increasing child labour did fit into that particular perception.[1]

Industrial Violence and the Legal Origins of Child Labor

Consult this handy reference work when you need accurate, up to date information on subjects ranging from the effects of work on children's education to the use of child labor in Eastern Europe.

Combating Child Labour

It is increasingly clear that children and the youth today play a significant role in the labour process in Africa. But, to what extent is this role benign? And when and why does this role become exploitative rather than beneficial? This book on children and the youth in Africa sets out to address these questions. The book observes that in Africa today children are under pressure to work, often engaged in the worst forms of child labour and therefore not living out their role as children. It argues that the social and economic environment of the African child is markedly different from what obtains elsewhere, and gets further to challenge all factors that have combined in stripping children of their childhood and turning them into instruments and commodities in the labor process. It also explains the sources, dynamics, magnitude and likely consequences of the exploitation of children and the youth in contemporary Africa. The book is obviously an Invaluable contribution to the discourse on children, while the case studies are aimed at creating more awareness about the development problems of children and the youth in Africa, with a view to evolving more effective national and global responses.

Childhood and Child Labour in the British Industrial Revolution

Challenges understandings of child labor by tracing how law altered the meanings of work for young people in the United States.

Inhabiting 'Childhood': Children, Labour and Schooling in Postcolonial India

Social welfare problems.

Child Labor

This book discusses issues of child labour such as poverty, malnutrition, social disadvantage, gender, globalisation, and education, and looks at both physical and psychological threats. The editors concentrate on child labour in the developing world, where most of it occurs.

Child Labor and the Industrial Revolution

Childhood looms large in our understanding of human life, as a phase through which all adults have passed. Childhood is foundational to the development of selfhood, the formation of interests, values and skills and to the lifespan as a whole. Understanding what it is like to be a child, and what differences childhood makes, are thus essential for any broader understanding of the human condition. The Routledge Handbook of the Philosophy of Childhood and Children is an outstanding reference source for the key topics, problems and debates in this crucial and exciting field and is the first collection of its kind. Comprising over thirty chapters by a team of
international contributors the Handbook is divided into five parts: · Being a child · Childhood and moral status · Parents and children · Children in society · Children and the state. Questions covered include: What is a child? Is childhood a uniquely valuable state, and if so why? Can we generalize about the goods of childhood? What rights do children have, and are they different from adults’ rights? What (if anything) gives people a right to parent? What role, if any, ought biology to play in determining who has the right to parent a particular child? What kind of rights can parents legitimately exercise over their children? What roles do relationships with siblings and friends play in the shaping of childhoods? How should we think about sexuality and disability in childhood, and about racialised children? How should society manage the education of children? How are children’s lives affected by being taken into social care? The Routledge Handbook of the Philosophy of Childhood and Children is essential reading for students and researchers in philosophy of childhood, political philosophy and ethics as well as those in related disciplines such as education, psychology, sociology, social policy, law, social work, youth work, neuroscience and anthropology.

Child Workers and Industrial Health in Britain, 1780-1850

The purpose of this collection is to bring together representative examples of the most recent work that is taking an understanding of children and childhood in new directions. The two key overarching themes are diversity: social, economic, geographical, and cultural; and agency: the need to see children in industrial England as participants - even protagonists - in the process of historical change, not simply as passive recipients or victims. Contributors address such crucial subjects as the varied experience of work; poverty and apprenticeship; institutional care; the political voice of children; child sexual abuse; and children and education. This volume, therefore, includes some of the best, innovative work on the history of children and childhood currently being written by both younger and established scholars.

Child Labour

Peter Kirby's analytical survey of child labour during the industrial revolution asserts that the concentration by some historians and social commentators upon small numbers of industrially-employed children has diverted attention from the important role of the working child within the context of the family, the labour market and the state. Kirby convincingly argues that during the Eighteenth and Nineteenth centuries, child labour provided an invaluable contribution both to economic growth and to the incomes of working-class households. The book also discusses the major issues involved in the study of children's employment.

Working-class Childhood and Child Labour in Victorian England

This is a unique account of working-class childhood during the British industrial revolution. Using more than 600 autobiographies written by working men of the eighteenth and nineteenth centuries Jane Humphries illuminates working-class childhood in contexts untouched by conventional sources and facilitates estimates of age at starting work, social mobility, the extent of apprenticeship, and the duration of schooling. The classic era of industrialization, 1790-1850, apparently saw an upsurge in child labour. While the memoirs implicate mechanization and the division of labour in this increase, they also show that fatherlessness and large sibsets, common in these turbulent, high-mortality, and high-fertility times, often cast children as partners and supports for mothers struggling to hold families together. The book offers unprecedented insights into child labour, family life, careers, and schooling. Its images of suffering, stoicism, and occasional childish pleasures put the humanity back into economic history and the trauma back into the industrial revolution.

The World of Child Labor

This book is made up of over 100 interconnected short stories that document moments in the lives of children who worked in the heart of South Africa's wine industry between 1996 and 2010, and are framed further by the farm uprisings of 2012. The children in the book - not all of whom managed to survive AIDS - are now young adults in a new South Africa that ostensibly offers them certain freedoms to overcome the shackles of race and class domination. However, without the kind of radical economic restructuring that would make this possible, all of the children remain extremely poor adults. As documented by the author, child labour of the 1990s inevitably gave way to adult labour, with the breath between childhood and adulthood as tender as it is tenuous. We are a nation that has managed to end the brutality of apartheid, but not one that has managed to replace brutality itself.

Child Labour

An Analysis of Childhood and Child Labour in Charles Dickens' Works: David Copperfield and Oliver Twist
The Role of International Law in the Elimination of Child Labor

Childhood and Child Labour in the British Industrial Revolution

The Industrial Revolution was a time of enormous change for the British society. Science and technology developed rapidly and brought wealth and improvement into many sectors of life; inventions like the steam engine, power looms, the spinning jenny or the expansion of the road and rail network made life easier. But on the other hand it was also the time of great misery, exploitation and tremendous class differences between a very thin and very wealthy upper-class, a rising middle-class and a very broad and to a great extent extremely impoverished working-class. But how was it like being a working-class child in Victorian England? To answer this question this work will take a close look at two of the most famous contemporary novels dealing with the depiction of children: Charles Dickens’ ‘David Copperfield’ and ‘Oliver Twist’.

Childhood and Child Labour in the British Industrial Revolution

This book stresses the importance of the eradication of child labor and provides a model workbook that sketches out systematically how the government, community and NGOs can efficiently work towards the effective eradication of this social problem.

Child Labour

Explores the issues surrounding child labor worldwide and offers solutions and a plea for more research to be done.

Centuries of Child Labour

Through a rich ethnography of street and working children in Calcutta, India, this book offers the first sustained enquiry into postcolonial childhoods, arguing that the lingering effects of colonialism are central to comprehending why these children struggle to inhabit the transition from labour to schooling.

Children, Consumerism, and the Common Good

In Britain the phrase ‘child labour’ is associated with the past, with children going up chimneys and down mines. However, in reality British children continue to perform arduous jobs, and British multinationals exploit child workers across the globe. This book explores the theoretical context of child labour research before considering the history of child labour and concluding with the present situation in the UK and USA.

A Thing of the Past?

Children, Consumerism, and the Common Good explores the impact of consumer culture on the lives of children in the United States and globally, focusing on two phenomena: advertising to children and child labor. Christian communities have a critical role to play in securing the well-being of children and challenging the cultural trends that undermine that well-being. Themes in the tradition of Catholic social teaching can move us beyond the tensions between children’s rights activists and those who propose a return to ‘family values’ and can inform practices of resistance, participation, and transformation. Roche argues that children are full, interdependent members of the communities of which they are a part. They have a claim on the fruits of our common life and are called to participate in that life according to their age and ability. The principle of the common good forms the benchmark for analyzing children’s participation in the market and the ways in which market logic shapes other institutions of civil society, particularly educational institutions. The Cristo Rey Network of schools is highlighted as an example of institutional transformation which shapes children's participation in education and the economic life of their families and communities in a spirit of solidarity.
Childhood and Child Labour in Industrial England

Offering a contribution to the debates on child labor, this book presents child labor as a problem to which various branches of international law have made a response. It treats a range of international law sub-disciplines, and analyses child labor in the context of social, economic and cultural issues.

Child Labour in Britain, 1750-1870

Child Labour (Print)

Most historical studies of child labour have tended to confirm a narrative which witnesses the gradual disappearance of child labour in Western Europe as politicians and social reformers introduced successive legislation, gradually removing children from the workplace. This approach fails to explain the return or continuance of child labour in many affluent European societies. Centuries of Child Labour explains changes in past child labour and attitudes to working children in a way that helps explain the continued survival of the practice from the seventeenth through to the late twentieth centuries. Centuries of Child Labour conveys a richer sense of child labour by comparing the experiences of the Northern European periphery to the paradigmatic cases of Britain and France. The northern cases, drawing heavily on empirical evidence from Sweden, Finland and Russia, test received ideas of child labour, through comparisons with Britain, France, Germany, Italy and Spain. Presenting the children themselves as the main protagonists, rather than the law makers, industrialists and social commentators of the time, Marjatta Rahikainen provides fresh information and perspectives, offering revelations to readers familiar only with the situation in France and Britain.

Child Labour in Hazardous Sectors

This is a unique account of working-class childhood during the British industrial revolution. Using more than 600 autobiographies written by working men of the eighteenth and nineteenth centuries Jane Humphries illuminates working-class childhood in contexts untouched by conventional sources and facilitates estimates of age at starting work, social mobility, the extent of apprenticeship, and the duration of schooling. The classic era of industrialization, 1790-1850, apparently saw an upsurge in child labour. While the memoirs implicate mechanization and the division of labour in this increase, they also show that fatherlessness and large sibsets, common in these turbulent, high-mortality, and high-fertility times, often cast children as partners and supports for mothers struggling to hold families together. The book offers unprecedented insights into child labour, family life, careers, and schooling. Its images of suffering, stoicism, and occasional childish pleasures put the humanity back into economic history and the trauma back into the industrial revolution.

Representing Children

This work examines the developments in the campaign against child labour and the defence of the rights of children.
